PROFESSIONAL SUMMARY

Machine Learning Engineer | B.Sc. Electrical Engineering (2024 Graduate). Dedicated the post-graduate year to an intensive technical specialization, earning 11 industry certifications from Stanford, DeepLearning.AI, and IBM. Proven expertise in building end-to-end ML pipelines, transfer learning for medical imaging, and handling imbalanced datasets, highlighted by a full-stack Credit Card Fraud Detection graduation project (3.7/4.0, A-). Proficient in Python, TensorFlow, PyTorch, FastAPI, Docker, and OpenCV, with a strong focus on deploying scalable, high-accuracy models.

TECHNICAL SKILLS

Modeling: Supervised & Unsupervised Learning, CNNs, Transfer Learning, Reinforcement Learning, XGBoost, Anomaly Detection

Tools & Infra: Python, FastAPI, PostgreSQL, SQL, Docker, Docker Compose, ONNX, Git, GitHub, VS Code, Linux

Libraries: TensorFlow, Keras, PyTorch, Scikit-learn, OpenCV, NumPy, Pandas, Matplotlib, Seaborn

Frontend: React, Vite, Tailwind CSS, shadcn/ui

Math Foundation: Linear Algebra, Calculus, Probability & Statistics

Competencies: Data Preprocessing, Feature Engineering, Model Deployment, Hyperparameter Tuning

EDUCATION

Bachelor of Science in Electrical Engineering — Computer and Systems | 09/2020 – 09/2024

Ain Shams University, Cairo, Egypt | **Cumulative GPA: 2.92 (Very Good)**

PROJECTS

Graduation Project: Full-Stack Credit Card Fraud Detection System | Grade: 3.7/4.0 (A-) | [GitHub](#)

- Designed and shipped an end-to-end fraud detection platform pairing an unsupervised Isolation Forest model with a real-time scoring API and an analyst-facing dashboard.
- Built a FastAPI backend that scores transactions on demand and persists every flagged event to a PostgreSQL Incident Log for auditing and review.
- Developed a modern React + Vite + Tailwind + shadcn/ui dashboard for live monitoring, transaction inspection, and incident triage.
- Containerized the full stack (DB, API, UI) with Docker Compose for one-command, reproducible deployment.
- Documented the data exploration, feature engineering, and model training in Jupyter notebooks; achieved a 3.7/4.0 (A-) graduation grade.

Breast Cancer Detection using Deep Learning | [GitHub](#)

- Built a transfer learning pipeline (VGG16) to detect Invasive Ductal Carcinoma in histopathology images with two-phase fine-tuning.
- Applied OpenCV for image preprocessing and ImageDataGenerator for data augmentation on 280,000+ image patches.
- Exported the final model as ONNX for production-ready, framework-agnostic inference.
- Result: Achieved ~94% accuracy, 0.99 AUC, and ~98% recall — critical for minimizing missed cancer diagnoses.

House Prices Prediction | [GitHub](#)

- Developed a regression model using advanced feature engineering and ensemble methods (XGBoost, Random Forest) on structured tabular data.
- Performed exploratory data analysis, handled missing values, and applied log transformations to improve model accuracy.

Digit Recognizer with CNN | [GitHub](#)

- Implemented a Convolutional Neural Network to classify handwritten digits from the MNIST dataset with high accuracy using TensorFlow/Keras.

CERTIFICATIONS

- Supervised ML: Regression and Classification | DeepLearning.AI & Stanford | 12/2025
- Advanced Learning Algorithms | DeepLearning.AI & Stanford | 01/2026
- Unsupervised Learning, Recommenders, Reinforcement Learning | DeepLearning.AI & Stanford | 01/2026
- Neural Networks and Deep Learning | DeepLearning.AI | 02/2026
- Machine Learning with Python | IBM | 03/2026
- Intro to Deep Learning & Neural Networks with Keras | IBM | 03/2026
- Deep Learning with Keras and TensorFlow | IBM | 04/2026
- Introduction to Neural Networks and PyTorch | IBM | 04/2026
- Deep Learning with PyTorch | IBM | 04/2026
- AI Capstone Project with Deep Learning | IBM | 05/2026
- Docker Training Course for the Absolute Beginner | KodeKloud | 04/2026
